

Common Problems in Rubber Product Manufacturing Plants & Troubleshooting

⇒ **New & Forthcoming Publication for the rubber industry will be available in July 2013.**

⇒ **Order Now with payment within this due date to get 20% off or at net USD 160 only.**

CONTENTS:

Chapter-1: Molecular Weight and Molecular Weight Distribution

- Introduction
- Polydispersity Index (PDI)
- Polymers
- Synthesis of Polymers
- Polymer Microstructure
- Polymerization Process
- Stages Involved in the Process of Polymerization
- Polymer Properties
- Chemical Properties
- Crystallinity
- Melting Point
- Glass Transition Temperature (T_g)
- Relation between T_g and Plasticizers
- Chain Length
- Molecular Weight Distribution
- Definition of Molar mass Averages
- Number Average Molecular Weight
- Weight Average Molecular Weight
- Viscosity Average Molecular Weight
- Polymer Morphology, Tacticity
- Isotactic Polymers
- Syndiotactic polymers
- Atactic polymers
- Chain Conformation
- Mechanical Properties
- Tensile Strength
- Young's Modulus of Elasticity
- Troubleshooting in Polymer Selection

Chapter-2: Art of Compounding

- Introduction
- Rubber Industry & Its Structure
- Designing of Rubber Compounding
- Polymer Blends and Guide to Rubber Selection

- Rubber Mixing
- Dispersion
- Extrusion
- Hot Feed Extrusion
- Cold Feed Extrusion
- Calendering
- Vulcanization
- Sulphur Blooming
- Determination of Rubber Hardness
- Typical Examples of Compounding Formulation
- Measurement of Vulcanizate Properties
- Tensile Strength
- Modulus
- Percentage Elongation
- Abrasion Resistance
- Tear Strength
- Resilience
- Ageing Properties
- Set Properties
- Troubleshooting in Compounding Design

Chapter-3: Rubber Chemicals

- Introduction
- Activators
- Zinc Oxide
- Stearic Acid
- Magnesium Oxide
- Reclaim Rubber
- Vulcanizing agents
- Accelerators
- Fillers
- Carbon Black
- Silica
- Calcium Carbonate
- Protecting Agents
- Processing Aids
- Peptizers

- Retarder
- Mineral oil
- Vegetable oil
- Waxes
- Esters
- Extenders
- Homoginizers
- Tackifying Agents
- Bonding Agents
- Blowing Agents
- Deodorants
- Flame Retardants
- Color and Pigments
- Abrasives
- Antistatic Agents
- Safety and Storage of Raw Materials
- Troubleshooting in Chemical Selection

Chapter-4: Vulcanization

- Introduction
- Cross-linking
- History of Vulcanization
- Vulcanizing Agents
- Type of Vulcanizing Agents
- Vulcanization with Sulfur
- Vulcanization with Peroxides
- Vulcanization with Metal oxides
- Vulcanization with Amines
- Vulcanization with Resins
- Vulcanization with Urethane
- Vulcanization with Electron Beam Radiation
- Vulcanization with Quinone Dioxime
- Vulcanization with Polysulfide Rubber
- Troubleshooting in Vulcanization

Chapter-5: Art of Mixing

- Introduction

- Importance of Rubber Mixing
- Dispersion
- Measurement of Dispersion
- Optical technique
- Electron Microscopy
- Electrical Measurement
- Mechanical Technique
- Open Mill Mixing
- Construction Details of Two Roll Mill
- Operation
- Synthetic Rubber Mixing
- Internal Mixers
- Intermix Mixers
- Economics of Internal Mixers
- Banbury Productivity
- Ram pressure
- Ram float condition
- Ram Position Indicator (RPI)
- Mixing Sequence
- Cooling/TCU System
- Ingredient Temperature
- Oil Temperature
- Rubber Temperature
- Carbon Black Temperature
- Batch weights
- Dump temperature
- Banbury Starting Temperature
- Rotors
- Friction Ratio of Rotors
- Rotor Speeds
- Rotor Tip Design
- Troubleshooting in Mixing

Chapter-6: Pneumatic Tyres

- Introduction
- Pneumatic tyre
- Tyre Market Dominant
- Developments of Tyre Constructions
- Tyre Construction Types
- Bias tyre
- Belted Bias tyre
- Radial Tyre
- Solid Tyre
- Semi-Pneumatic Tyre
- Tyre Business World Wide
- Evolution of Tyre Manufacturing Technology
- Chronological Development of Tyres
- Evaluation of Tyre Cords
- Terminologies on Tyre Cords
- Terminologies on Radial Tyre Use
- Tread Wear
- Tyre Wear Problem
- Cupping
- Tyre Conicity Problems
- Tyre Vibration Problems

- Tyre & Wheel Runout can also cause Vibrations
- Tyre Air Pressure
- Advantages of Correct Tyre Inflation
- Disadvantages of Underinflation
- Disadvantages of Overinflation
- Air Pressure and Temperature Fluctuation
- Air Pressure and Time Fluctuation
- Nitrogen Gas
- The Concept of Radial Tyre Uniformity
- Force Variation Background
- Tyre Uniformity
- Radial Force Variation
- Lateral Force Variation
- Tangential Force Variation
- Conicity
- Ply Steer
- Radial runout
- Lateral runout
- Sidewall bulge and depression
- Tyre Uniformity Measurement Machines
- High Speed Uniformity Machines
- Tyre uniformity correction
- Tyre Uniformity Measurement Technology
- Contact stylus
- Capacitive sensors
- Fixed-point laser sensors
- Troubleshooting in Tyre Making and Tyre Use

Chapter-7: Inner-tube Processing and Manufacturing

- Introduction
- Background
- Manufacture of Inner-tubes
- Compound Formulation
- Cure System
- Intermix Mixing of Inner-tube Compound
- Single Stage Mixing
- Flow of Compound
- Changes of compound behavior in different environment
- Straining
- Extrusion
- Hot Feed Extrusion
- Cold Feed Extrusion
- Extrusion Uniformity
- Variable Tube Width
- Valving
- Splicing
- Knife Current Variations
- Over hang / Clearance Between the Knives and Rubber Edge
- Knife Angle
- Alignment of Rubber Clamp Faces
- Knife Slow Down Points
- Running Adjustments

- Maintenance of Knife
- Splice Defects
- Splice Rind Cracking
- Splice Chilling
- Preforming
- Vulcanization
- Inspection
- Segregation
- Packing
- Troubleshooting in Inner-tube Processing

Chapter-8: Bladder Processing & Manufacturing

- Introduction
- Properties Required for Curing Bladder
- Raw Materials Required
- Functions of Ingredients
- Butyl Rubber
- Carbon Black
- Castor Oil
- Neoprene / Chlorprene
- Stearic Acid
- Zinc Oxide
- Methylol Phenol Resin
- Oxidative Degradation
- Selection of Low Unsaturation Level of Butyl
- Scorch Retarder
- Flow Improver
- Uniformity in Mixing
- Care in Extrusion, Making of bladder slugs and Storing
- Care in curing, Post curing and Storage
- Molding/Vulcanization
- Post curing
- Controlling Oxygen Level in the Central Mechanism
- Internal
- Steam/Hot water with chemical oxygen scavenger
- Steam/Hot water with contact heater (Deaerator)
- Steam/Hot inert gas (Nitrogen)
- O- ring/Diaphragm of Central Mechanism
- Metal Contamination in Hot Water/Steam
- Quality of Green Tyre
- Service Condition
- New Technology Trend
- Injection Molding
- Bladder Design
- Thickness to Radius of Curvature Ratio
- Bladder wall thickness
- Surface Design on Bladder
- Check List of Bladder Failures
- Key Points in Bladder Processing
- Troubleshooting in Tyre Curing Bladder

I Would like to buy **“Common Problems in Rubber Product Manufacturing Plants & Troubleshooting”** Copies.

Please mail to the following address:

Company Name.....Contact Person.....

Address.....

.....

.....Country.....

TelFaxE-mail.....

Payment Method: - By draft/cheque payable to T.R.I Global Company Limited.
 - By Bank Transfer to T.R.I Global Company Limited through
 The Siam Commercial Bank PCL., Ratchada Pisek-2 Branch
 Account No.A/C 075-301-790-8 SWIFT CODE : SICOTHBK

Please fax the filled form to (662) 512-2129 or E-mail: mktg.mgr@rubbmag.com or mktg.asst2@rubbmag.com
